
YAP Limits Endothelial Activation (p 43)

Dr Yang Lv studied medicine in China and earned her MD at Hebei Medical University in 2012. After graduation, she decided to pursue a research career and joined the PhD program in Pharmacology at Nanjing Medical University, under the mentorship of Dr Gang Hu. Since 2015, she has worked as a visiting scholar in Dr Guochang Hu's laboratory in the Department of Anesthesiology at the University of Illinois at Chicago, where she is studying the molecular mechanisms of endothelial activation and vascular inflammation during sepsis. She will complete her PhD project in June 2018. Yang is a person who likes challenges and enjoys the process of solving problems. She always believes that the whole world will help you to achieve something if you really want something. Besides science, Yang is a quiet girl in her personal life and likes reading books and observing the interesting things in daily life. "I am very lucky to be part of a promising and excellent group and ready for more challenges in the future," she says.
