Recovery is possible.

Overdose is a leading cause of death in pregnant women. And there’s no better time than pregnancy for a woman to begin treatment for opioid use disorder.

Medication assisted recovery (MAR) is an evidence-based treatment proven to improve outcomes, decrease the risk of relapse, and reduce maternal death. And it’s perfectly safe for a pregnant woman and her unborn child.

To help your patient find the recovery, treatment, and services that she needs, connect with the IL Helpline.
